

Fine Bar Technology in Refining System for Pulp & Paper Industries

Desarada Shekhar C.

ABSTRACT

Refining plays an important role in stock preparation as well as throughout - the complete paper making process. Next to raw material selection, it has the greatest influence on final product quality. The new finer bar width and narrower grooves, resulting in increased cutting edge length (CEL). The fine bar design secures a reduction in specific edge load (SEL) and no-load power. Obtain optimum strength properties with low intensity refining for mixed hardwood & Recycled fiber
