

Trends In Paper And Board Industries With Respect To Improving Printability

ROBINSOR DAVID

ABSTRACT

The use of wetend and surface chemicals in the Paper & Board manufacturing process has a major impact on print performance. The BASF commitment in making our customers more successful, allows us to work jointly towards improving the quality of our customers product. In this publication we will describe the properties of Paper & Board which are important for the achievement of a good print result. The article will also cover some recent trends in the Paper & Board Industry to enhance print performance.
